

KYAW HMUE SAN

SOFTWARE ENGINEER

+66979987825

kyawhmuesan@gmail.com

www.khs_portfolio.com

Chiang Rai, Thailand

Education

Bachelor of Software Engineering

Mae Fah Luang University
2024 - 2028

Moo 1, Tha Suea 333, Muang, Chiang Rai 57100

Certifications

- Certified Frontend Development from Coursera
- Certified Backend Development from Coursera
- Certified Google UX Design

Soft Skills

- Organized
- Creativity
- Teamwork
- Meeting deadlines
- Critical thinking

Technical Skills

- Frontend: React, JavaScript, TypeScript, Tailwind CSS
- AI Workflows: Cursor, Windsurf, ChatGPT, GitHub Copilot, Gemini, Claude-Sonnet
- Backend/Data: Java (Spring Boot), Node.js, SQL, NoSQL
- Productivity: Git, Docker, Rapid Prototyping, Figma-to-Code

Language

- English

About me

I am a high-efficiency Frontend Engineer and second-year Software Engineering student specializing in React and the AI-assisted development lifecycle. I leverage AI tools like Cursor and ChatGPT to accelerate development speed while maintaining high code quality and architectural integrity. Currently, I am evolving an AI-powered Online Learning Platform from a Java console app into a full-stack React and Spring Boot application, focusing on rapid iteration and user-centric design.

Experience

Learning Management System (LMS)

Full-Stack Developer | Spring Boot, React, SQL

- **Situation:** Transitioned a Java console-based prototype into a comprehensive, web-based educational platform similar to Coursera and Udemy.
- **Action:** Architected the system using Spring Boot for the backend and React for the frontend. Heavily utilized Cursor to automate boilerplate code, scaffold complex API endpoints, and refactor the legacy Java logic into modern services.
- **Result:** Successfully implemented distinct roles for Students, Admins, and Instructors, delivering a production-ready MVP 40% faster than traditional manual coding timelines.

High-Efficiency "Online Enrollment" & Dashboard System

Backend Engineer | Node.js, SQL, Data Management

- **Situation:** Developed the core logic for an "Online Enrollment" system and a "Powerful Dashboard" for real-time tracking of academic data.
- **Action:** Focused on Backend Engineering, using AI-driven workflows in Cursor to design a highly optimized SQL database schema and efficient data-retrieval APIs.
- **Result:** Built a robust data layer capable of handling high-volume enrollment traffic and real-time dashboard updates, meeting high-efficiency standards through AI-assisted refactoring and debugging.

Cursor Hackathon: "AI Diplomacy Translator"

Lead Developer | AI-Driven Rapid Development

- **Situation:** Competed in a Cursor-focused hackathon to build a real-time translation.
- **Action:** Used an AI-first workflow to build a "Diplomatic Interpreter" that translates speech into a polite, constructive tone to prevent conflict.
- **Result:** Demonstrated deep expertise in Cursor, navigating a "ship fast" environment to deliver a functional, high-impact AI tool within a strict time limit.

AI/ML Hackathon: "CareerMate"

Lead Developer | AI/ML Integration

- **Situation:** Participated in an AI/ML competition to solve career-related challenges for students and professionals.
- **Action:** Integrated AI/ML models to provide personalized career guidance and matching. Used AI coding tools to bridge the gap between complex ML logic and a user-friendly interface.
- **Result:** Successfully delivered a data-driven prototype ("CareerMate") that showcases the ability to implement and refine AI-generated code in a high-pressure, competitive setting.
